

Interpreter

Definition  
Given a language, define a representation for its grammar along with an interpreter

Forum

Guest

(make it so that they can't do things on the website because they are Guests)

(the name and password instance variables will be set to null or the name will be guest)

Users

name:String  
password:String  
(possibly add in boolean values that say what kind of user the object is)

Moderator

+editForum(Forum) (other input variables to be determined once we get going on the Forum objects)

App

-name:String  
-developerName:String  
-description:String  
-version:String  
-rating:double  
-link:String  
-forum:Forum  
-String[] platforms  
-accepted:boolean(True if admin has accepted it)

+ getters(for all our instance variables)  
+setter for accepted Boolean

Administrator

+addApp(\*app information\*)

MamaServlet
